
Business Operating Systems

Univo — a modular ERP and CRM stack for organisations that want their business software to grow with them, not against them.

THE PRODUCT

Univo, in one line.

Univo is our own ERP and CRM stack. It gives you the modules a modern business runs on — finance, procurement, inventory, HCM, projects, sales, QHSE — with a single data model, a single identity and a single audit record. You install what you need today, and add the rest when the business asks for it.

MODULES

What Univo covers.

MODULE Finance GL, AP, AR, banking, tax. IFRS-aligned, VAT-ready for the GCC.	MODULE Procurement Requisitions, RFQs, POs, GRN, vendor performance. Approval matrix out of the box.	MODULE Inventory Stock, transfers, valuation, cycle counts. Multi-warehouse, multi-currency.
MODULE HCM Master data, attendance, leave, payroll, WPS. Emirati Nationalisation reporting.	MODULE Projects Estimation, cost control, resourcing, milestone billing, WIP.	MODULE Sales & CRM Leads, opportunities, quotations, orders, customer service.
MODULE QHSE Incident capture, CAPA, safety audits, compliance packs.	MODULE Assets Asset lifecycle, depreciation, maintenance schedules, work orders.	MODULE Reporting Governed reporting layer. Every dashboard traces to source transactions.

WHY ORGANISATIONS CHOOSE UNIVO

What separates it in the market.

- Modular by design. Buy one module. Prove it. Add the next. Univo is designed for phased adoption, not big-bang programmes.
- One data model. Finance sees the same customer master as sales. HCM sees the same employee master as payroll. No reconciliations between modules.
- Cloud or on-premise. Same codebase. Same features. You choose where your data lives. No pricing penalty for on-premise.
- AI-agent ready. Univo is the reference ERP for our AI Agent Platform. Every module exposes governed tools that agents can safely call.
- Regionally aware. VAT, WPS, Emiratisation, Arabic-language screens, hijri calendar support. Built for the GCC from the ground up.

HOW IT DEPLOYS

From decision to go-live.

DISCOVERY 2 weeks Process review, module scoping, data assessment, integrations, success measures.	FOUNDATION 3-4 weeks Environment, identity, chart of accounts, base masters, sandbox.	PILOT 4-6 weeks One function or business unit live in a controlled group. Behaviour tuned.
ROLLOUT Phased Function-by-function. Training and change management run alongside.	OPERATE Ongoing Support, patching, quarterly releases, module expansion.	EXTEND As needed Adjacent modules or verticals — Drone, Examinations, AI Agents — on the same identity.

FIT

Where Univo lands best.

- Mid-market operators (50-2,000 employees) that need a real ERP but not a two-year programme.
- Organisations replacing a patchwork of spreadsheets, legacy point tools or an ageing ERP with a support cliff.
- Regulated industries — construction, contracting, distribution, professional services, healthcare, education — where the audit trail matters as much as the throughput.
- Groups with data-residency or sovereignty requirements that rule out foreign-hosted SaaS.

NEXT STEP

See it running against your own scenario.

We prefer to demo Univo against a slice of your own data — a real customer, a real chart of accounts, a real month-end. Reach us at sales@omiksatechnologies.com to arrange a working session.
