

EXAMINATIONS

Safe Examinations

Proctor LMS — authoring, secure delivery and AI proctoring for organisations whose examinations must stand up in front of a regulator, an auditor or a court.

THE PRODUCT

Proctor LMS, in one line.

Proctor is our end-to-end examination platform. Authors build assessments; candidates take them under supervised conditions; a complete evidence pack is generated for every sitting. It is designed for the examinations that have consequences — licensing, certification, hiring, admission.

CAPABILITIES

What Proctor covers.

CAPABILITY Assessment authoring Question banks, blueprinting, randomisation, sectioning, multi-language, mathematics.	CAPABILITY Secure delivery Lockdown browser, environment checks, network resilience, offline-tolerant sittings.	CAPABILITY AI proctoring Identity verification, gaze tracking, second-person detection, screen and audio monitoring.
CAPABILITY Live proctoring Human oversight for high-stakes exams. Escalation from AI signals to a proctor console.	CAPABILITY Result orchestration Grading rules, standard setting, scaled scores, moderation workflows.	CAPABILITY Evidence packs Every sitting produces a court-defensible record — actions, timestamps, video, integrity flags.

WHY PROCTOR

What separates it.

- Built for consequence. The default posture is high-stakes: strong identity, strong evidence, strong audit. Lower the ceremony where you can afford to, not the other way round.
- Sovereign hosting. Proctor deploys in the jurisdiction that owns the exam. No candidate data crosses a border it is not permitted to cross.
- Evidence you can defend. The record of every sitting is inspectable, replayable and exportable in formats a regulator or a court will accept.
- Operational at scale. From twenty candidates to twenty thousand, the same platform, the same evidence discipline.

From arrival to evidence pack.

STEP 01 Identity Government ID capture, facial match, environmental check. Deviations flagged.	STEP 02 Lockdown Second monitors, background applications and clipboard use are eliminated at start of sitting.	STEP 03 Live sitting Continuous integrity monitoring: gaze, audio, second-person, screen anomalies.
STEP 04 Escalation AI flags route to a live proctor for judgement — not an automatic invalidation.	STEP 05 Submission Answers, video, event log and integrity summary sealed together as one record.	STEP 06 Evidence pack Per-candidate export ready for moderation, appeal or regulator review.

FIT

Who this vertical is for.

- Professional bodies running licensing and certification examinations.
- Universities and training institutes running remote or campus assessments at scale.
- Corporates running structured hiring assessments, internal certifications and compliance tests.
- Regulators and government programmes requiring a sovereign, evidence-grade examination platform.

NEXT STEP

Walk one exam through the platform.

The clearest evaluation is to walk one of your own examinations through Proctor end-to-end — authoring, sitting, evidence pack. Reach us at sales@omiksatechnologies.com to arrange the session.
